

Stakeholder analysis

Name:	Kawthar Alkhateeb
Community & UN SDG(s):	Community: Canadian household and individuals who have concerns about their food waste and would like to reduce that and contribute to a more sustainable world. SDGs: 2, 12 and 13
Date:	19-Oct-2023

Project Name		Scraps2Dishes		
Name	Project Role	Power	Interest	Level of Support
Household and individuals	Users who are going to use the software are a key stakeholder and focus in this project.	High	High -> I'll say that this depends, but I think that many users will have a high interest in an app like this that helps them reduce their food waste and eat new delicious recipes.	High -> if people have a high interest in Scraps2Dishes, then then level of support would be great.
Parents and Caregivers:	Parents and caregivers are considered a main user group that may use this app.	High	High - I believe that Scraps2Dishes is of high interest for parents and caregivers because children do waste food and their caregivers don't want to waste the leftovers instead they may be interested to teach their children to learn more about sustainable ways for consumption.	High
